## Veterinarian Recommended

### Maximum Strength Hip & Joint Formula

150gr, 60 servings/scoops

#### How is Natural Stride for Dogs different?

All the ingredients work together to provide your dog with maximum benefits and relief. Not only looking at the symptoms of arthritis but going after the root cause of the problem. Each therapeutic dose will help facilitate healing as well as providing your dog with a faster recovery time.

#### INGREDIENTS BENEFITS:

**CETYL MYRISTOLEATE** is an all-natural esterified fatty acid that dramatically help in joint function:

- It works at the cellular level and by modifying the immune system response to arthritis. It has a “calming” effect on the immune system.
- Acts as an all-natural anti-inflammatory, reducing arthritis symptoms and tissue damage.
- Helps lubricating the joints to improve flexibility and mobility (often referred to as the WD-40™ for the joint)

**GLUCOSAMINE HCL** is the most potent form of glucosamine. Glucosamine is a normal constituent of glycoaminoglycans in cartilage matrix and synovial fluid. It has been shown through many studies to alleviate pain and help rebuild cartilage.

**MSM** (methylsulfonylmethane) provides sulfur, a vital building block of joints, cartilage, skin, hair and nails, and methyl groups, which support many vital biochemical processes in the body, including energy production.

**VITAMIN C** is a powerful antioxidant, fighting molecules, which trigger rheumatoid inflammation. Vitamin C serves a role as a cofactor in collagen synthesis, the main protein in joint tissue and bone. Vitamin C plays a role in fighting infection and may work to control inflammation.

**HYALURONIC ACID** (also called hyaluronan or HA) is the primary component of the Synovial fluid found in the joints. As we age, hyaluronic acid level drops, which can cause our joints to become weak. Synovial fluid that protects joints is largely made up of hyaluronic acid and acts as a lubricant, shock absorber and nutrient carrier.

**GLUCOSAMINE SULFATE** is a particularly well absorbed glucosamine combination which may help to relieve pain in osteoarthritis particularly of the hips and knees.

**OMEGA 3** fatty acids are considered essential fatty acids. Research shows that Omega 3 fatty acids reduce inflammation and may help lower risk of chronic diseases such as heart disease, cancer and arthritis.

**YUCCA** is a medicinal plant native to Mexico. Yucca extracts have anti-arthritis and anti-inflammatory effect. Yucca is also a rich source of polyphenolics, including resveratrol and a number of other stilbenes (yoccoals A, B, C, D and E). Yucca phenolics are also anti-oxidants and free-radical scavengers, which may aid in suppressing reactive oxygen species that stimulate inflammatory responses.

#### Included per serving (per scoops):

Cetyl Myristoleate (100% Vegetable source) .....	500mg
Glucosamine HCL (Shellfish source).....	500mg
Glucosamine Sulfate .....	500mg
MSM (MethylSulfonylMethane) .....	300mg
Omega 3 (Fish Oil).....	50mg
Vitamin C (Ascorbic acid) .....	50mg
Yucca .....	25mg
Hyaluronic Acid (HA) .....	10mg

#### DIRECTIONS FOR USE

**Initial Period:** Administer 1 scoop per day per 25 lb of body weight for 3 to 4 weeks or until desired results. **Maintenance:** Administer 1/2 scoop per day per 25 lb of body weight. Severe cases or older dogs may be maintained at high dosage.

Give your dog the relief it deserves.
